

The DV-HR300 DVD recorder has an internal hard disc drive (HDD) that can record and store more than 100 hours of programming so you can record a full season of shows and watch them anytime.

The DV-HR300 combines an 80 GB* hard disc drive and a DVD-R/RW recorder to create the ultimate all-in-one viewing, recording and storage device. Other features include high-speed dubbing, CD/MP3 playback and simultaneous recording/playback. The DV-HR300 DVD recorder provides convenient and simplified programming with VCR Plus+® and has a DV Terminal with i.LINK™ so consumers can digitally transfer video directly to DVD.

Features include:

Internal Hard Disc Drive (HDD 80 GB*) enables you to store and record 100+ hours of programming for you to view at your discretion.

DVD+RW Playback allows a user to playback DVD+RW type recorded material; this flexibility provides even more playback functionality from other sources.

Progressive Video Output allows a progressive signal to be outputted to a compatible monitor, the progressive mode will produce a dynamic image with no interlaced artifacting.

Editing Function will erase sections of recorded scenes easily in addition to renaming the displayed titles. The thumbnail image for chapter selection can be changed to any image you choose. Chapter marks can be added for quick scene selection in addition to dividing and combining chapters together.

VCR Plus+® / Easy Record Guide allows you to program your timer recorder by simply inputting a Pluscode number. Pluscode numbers are listed in TV guides and local TV listings. Easy Record Guide displays a channel grid on screen and the user can select date, channel and time in 15 minute time frames.

EZ Setup/Auto Clock detects all off air and cable channels in addition to setting the clock via your local PBS station.

Digital Gamma Picture will increase the dark areas of a video without overdriving the lights areas, this will allow more detailed information to be displayed in a bright room environment.

Tamper Proof allows the recorder functions to be locked even with the power off thus preventing children or others from using or changing the recorder timer functions.

Universal Remote controls all functions of the DVD-RW recorder in addition to controlling other brand TV's power, volume and channel selection.

Analog Inputs will give the user connections for taking existing video sources and connecting them for recording purposes. There are three S-Video inputs/composite video inputs.
