## Explanation of Technology

### HD-ILA

- HD-ILA incorporates JVC's **Direct Drive Image Light Amplifier**: Our exclusive three color chip technology provides a superior high contrast, flicker-free image. HD-ILA is also brighter, more natural and lasts longer than DLP, LCD, or PDP (each user replaceable bulb provides a 7000-8000h target life).

### D.I.S.T.

- D.I.S.T. stands for: **(Digital Image Scaling Technology)**. JVC's fifth generation D.I.S.T. seamlessly up-converts any video source to 770p, thereby drastically reducing jagged edges and increasing the resolution of the original video.

### DGC

- DGC stands for: **(Dynamic Gamma Correction)**. Utilizing data from every signal level, DGC insures that the tonal gradations are preserved from the darkest areas of an image all the way through the brightest. Images are transition-free for perfect detail.

### DSD

- DSD stands for: **(Digital Super Detail)**. State-of-the-Art focusing technology that works to reproduce completely focused images in both still and highly active scenes.

### 16Mega 10bit 3D Y/C Comb Filter

- Best Comb Filter in the industry. This corrects hanging dots, color bleeding and other cross color interference for a clear, super sharp picture.
