PlasmaSync®
42VP4 and **42VP4D**

Whatever the angle, clear images give you a clear advantage

Stop them in their tracks!

NEC's new 42" Public Display Series PlasmaSync monitors draw your audience right into your message and command their attention. Super bright images, pure reds and saturated colors combined with built in stereo audio make sure your message is always loud and clear no matter what your environment or your angle. In areas with direct lighting an anti-glare filter on the 42VP4D keeps images vibrant and contrast high while the 42VP4 features an anti-reflective filter for areas with controlled lighting. Either way, the view will be picture perfect every time.

A sleek new design with cable management system, programmable timer and portrait capability make them the perfect choice for any public environment. No matter how you look at it, the new 42" Public Display Series gives you a clear opportunity to get their attention and sell!

The 42VP4D features an anti-glare filter which diffuses direct light sources. Image is easy to see under even severe lighting conditions

The 42VP4 features an anti-reflective filter for controlled lighting situations. Provides a sharp and crisp image.

superior image no matter how you view it

The 42 Public Display Series offers wide VGA native resolution to give your ideas more power and clarity than ever. The monitor 's wide VGA panel provides a sharp, crisp display of high-resolution text and graphics and its progressive scan driving method offers stable, flicker-free images. Advanced AccuBlend scan conversion provides high quality scaling for non-native resolutions signals. And sophisticated video signal processing, including motion-compensated 3D scan conversion and 3/2 pull down processing, delivers smooth, lifelike video. NEC 's patented Capsulated Color Filter ensures realistic color and it's further enhanced by AccuCrimson technology for the purest reds possible.
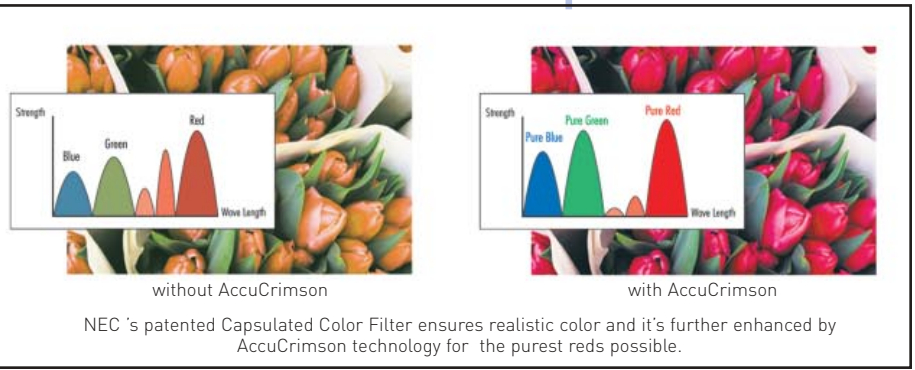

connect every which way

Connect to multiple sources from video to HD to RGB. Signal loop-out capability allows a source to easily be looped from one monitor to the next allowing you to connect 4 displays without the use of an external DA*.

suit your style with portrait or landscape

Depending on your needs, you can display in either portrait or landscape orientation.

matrixing simplified

The built-in matrix gives you greater flexibility by allowing you to arrange the monitors in a 2x2 (84˝) or 3x3 (126˝) matrix without an external processor. The Auto ID feature allows the setup of the matrix to be simpler. The repeat timer allows two different matrix settings, creating a self running demo.

AccuShield showing inverse RGB function

digital AccuDevice and MASS technology for smooth lines
The newly developed Digital AccuDevice, delivers jitter free images and reduces distortion. MASS technology smooths jagged lines and corrects color bleeds for clear stable color images and easy-to-read text.

save your screen with AccuShield phosphor protection
Your screen stays protected from image retention with the most comprehensive set of built in modes including programmable Orbiter, Inverse RGB, All-White, Pixel Refresh and Brightness Limiter.

your message gets heard
No need to purchase and attach a separate audio component to your monitor. The built in stereo amplifier provides 8W x 8W making sure your message is loud and clear.

convenient and sleek
The cabinet design allows for a small form PC to be attached solving the problem of source equipment location. A cable management system allows you to achieve a clean appearance without costly enclosures.

fanless design for quiet operation
The 42VP4 and 42VP4D features a fanless design in both portrait and landscape for silent operation no matter what environment it is in.

virtually self-operating
A programmable timer can be set up to virtually operate itself by setting power on/off, changing inputs and selecting AccuShield modes.

ecological design
Power consumption 275W is the lowest in the industry.

external control and self diagnostics
A complete set of RS232 commands allow monitor functions to be operated remotely via serial communications. In addition, operating problems can be identified and communicated via RS232 or front bezel LED lights through its self diagnostics system.
