

ACOUSTICPRO1080
By Elite Screens

Acoustically Transparent Woven Screen Material

Elite's **AcousticPro1080™** material is designed for use with a native 1080P front projector. It has a special fabric weave for acoustic transparency that greatly reduces light penetration. It is a 1.0 Gain matte white mesh material with outstanding sound quality, damping at 20 KHz only 2.0dB and Max. Attenuation at 20cm is around 1.1db. The side-weave mesh pattern has only a 8% light loss, and coated fabric provides true color rendition to ensure both audio and video quality with each presentation. The Elite AcousticPro1080 Woven Acoustically Transparent Screen is your best choice for use with high quality in-wall audio installations and 1080P projectors and has a detachable black-backing on its fixed frame models.

(shown here with CineTension2)

- Woven square mesh pattern with 0.25mm perforations
- Gain: 1.0
- View Angle: 160° (80° ±LR)
- Mildew Resistant
- Surface can be cleaned with (water) moist cotton cloth
