

**Angular Reflective Front Projection Screen Material**

Elite's **StarBright 7** material has a Ultra High 7 Gain (UHG) and was developed for home theater but is ideally suited for well lit Commercial Applications such as Houses of Worship, Stadiums, Conference and Training Rooms.

Its HCF (High-Contrast Filter) allows the projected image to be reflected while absorbing the incident light. Special surface coating reduces hot spotting and enhances the video color balance. Its Angular Reflective multi-layered configuration focuses the light into a concentrated but reasonably wide half-gain cone that is ideal for use in a tough ambient light presence.

(shown here with Elite PrimeVision)

**Elite Screens Series: ezFrame, Elite PrimeVision**

- PET optical film material with special coating supports high uniformity and picture clarity
- Gain: 7.0
- View Angle: 120° (60° ±LR)
- Mildew Resistant
- Special cleaning required (see manual)
